

# Better projects. Better contracts. Brighter future.

View® is a cloud-based marketplace platform for clean energy developers and power producers.

Join View® to connect your solar and storage projects to a larger universe of energy off-takers, landowners, and other key partners.

# Develop Marketplace

Support your growth targets by acquiring high-quality sites

Develop Marketplace supports your land acquisition and development teams. It is *free to sign up*, with a success fee at milestones (i.e., Site Control, NTP).

- Use the Develop Marketplace to acquire high-quality sites to feed the top of your early-stage development pipeline.
- If you have a subscription you can further analyze sites as deal conditions change.
- Save time reaching site control with landowners who are educated on the land transaction process.

Mockup for demonstration only. Subject to change.

Sites are pre-qualified in terms of

- solar resource
- topography
- grid interconnection
- wetlands
- flood zones
- commercial feasibility
- *and more!*

# Develop Analyze

Increase quality and volume of your early-stage development pipeline by streamlining your workflow with View®

View® is a software platform that accelerates your early-stage clean energy development process.

View®'s artificial intelligence and patented algorithms to search through >180 billion project permutations to show you the commercial results of development and origination decisions – and ultimately guide you toward better value PPAs.

- View® is backed by DNV Ventures, and offers access to DNV technologies and services.

- Reduce project risk with high-quality input data from DNV's Solar Resource Compass and SolarFarmer, resulting in high-accuracy, pre-bankable outputs.
- Increase your team's efficiency to evaluate sites, find the site configuration with the lowest LCOE, and understand which projects to move forward in your pipeline.
- Rapidly assess your project's commercial feasibility in terms of LCOE, NPV, Off-taker's Settlement, DSCR, and Cash Flow.

Up to

60

basis points gained on return per project

According to an independent evaluation by Itai Suez, former Sr. Solar Engineering Manager at EDP Renewables North America

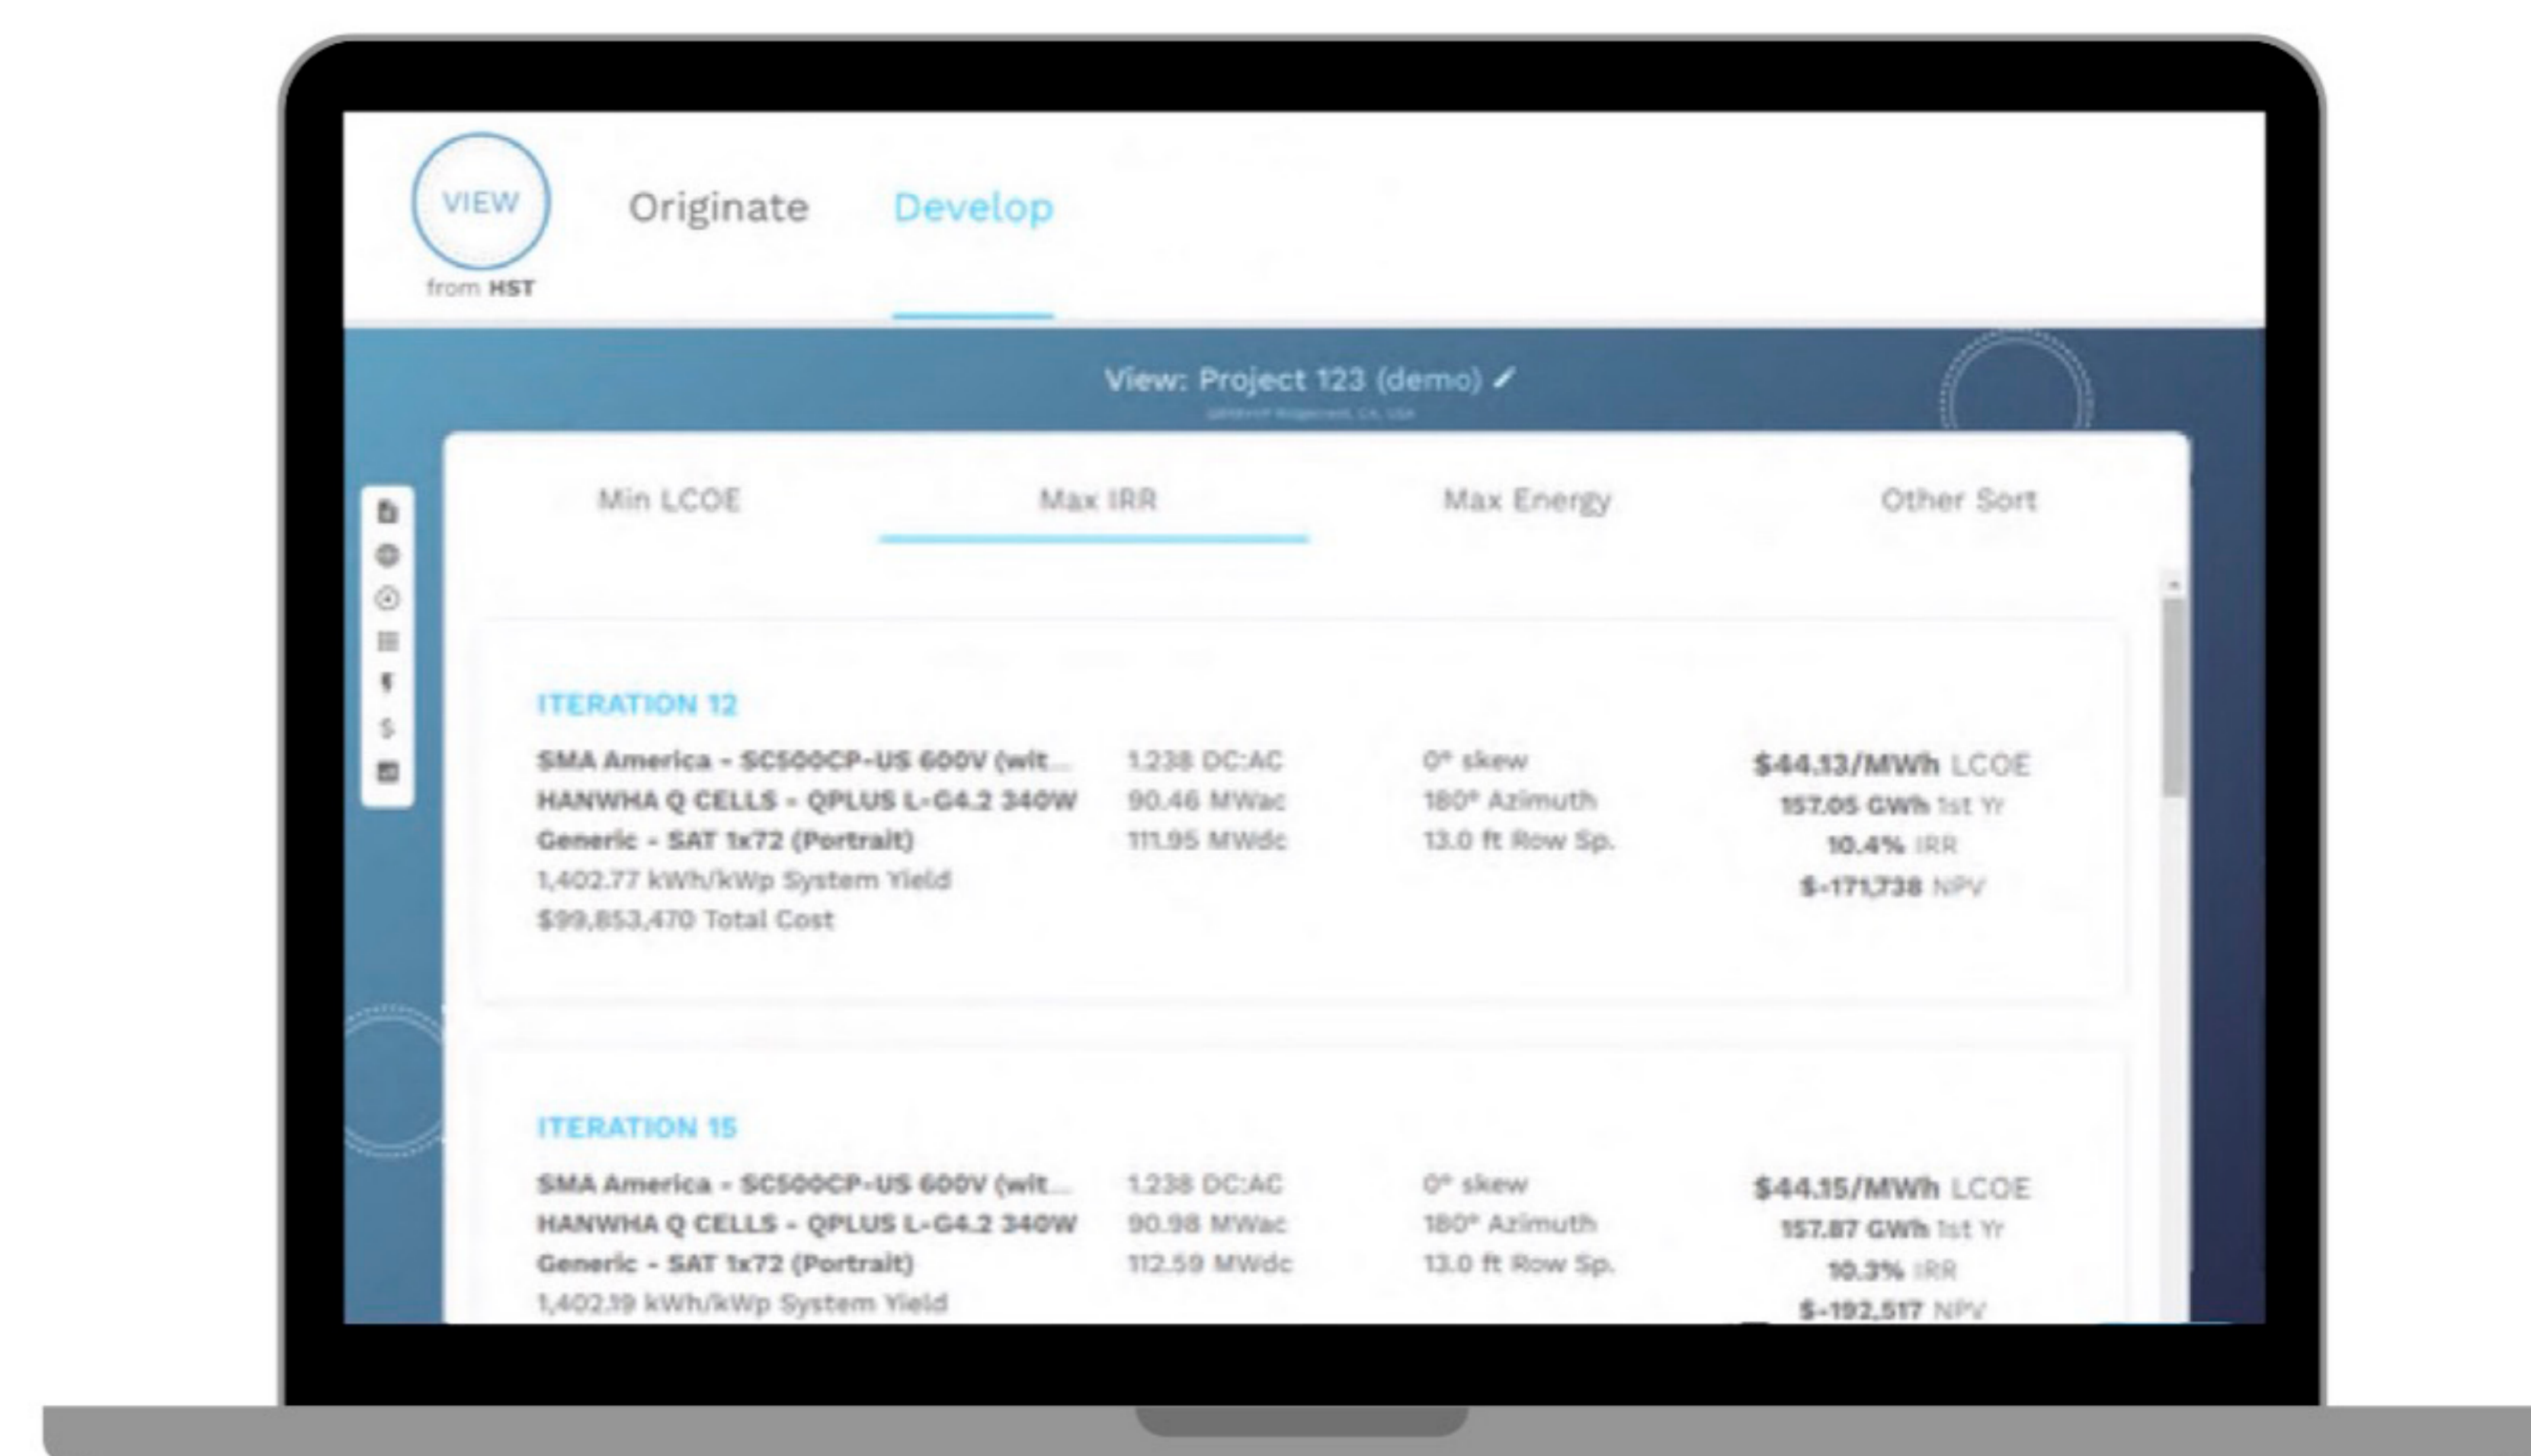

Up to

70%

increase in project volume

According to Marynes Cabrera, Senior Development Engineer at Avangrid Renewables

# Originate

Accelerate deals by listing projects to the Cue Marketplace for PPAs

Originate works in tandem with your origination team, supplying additional off-takers beyond your current book of business. It is free to sign up for Originate, with a success fee at milestones (i.e., LOI, PPA, NTP).

- Use Develop Analyze to determine the best configuration of your project to publish to the marketplace.
- Understand the financial outcomes for you and the off-taker's settlement from the beginning to ensure a more balanced contract.
- Find off-takers that match well to your project based on location, PPA price, target and guaranteed COD, and more.

## A sample of off-takers ready for projects from Originate

	Total Load (MWh/year)
PJM	
• Defense	1,000,000
• Internet services	53,000
NYISO	
• Major bank	600,000
• Major supermarket	500,000
MISO	
• Major manufacturer	240,000
• Bioscience	180,000
CAISO	
• Food production	106,000
• Manufacturing	95,000

	Total Load (MWh/year)
ERCOT	
• Chemical manufacturer	400,000
• EPC	36,364
ISO-NE	
• Large retailer	500,000
• Manufacturing	200,000
Southeast (non-ISO)	
• Transportation	105,000
• Manufacturing	80,000
West (non-ISO)	
• Hospitality	500,000
• Plywood supplier	85,000
